# YELKAYE IT CONSULTING

## Yelkaye IT Consulting @Cyber

Generally, compliance is defined as coming along with rules and meeting provisions. In Cybersecurity, compliance means formulating a program that establishes risk-based controls like advanced threat-hunting capabilities, deep analytics, and correlation, malware analysis to protect the integrity, confidentiality, and accessibility of information stored, processed, or transferred.

Cybersecurity has emerged as one of the topmost business risks in the evolving threat landscape. That's why our primary goal is to join you up with Cybersecurity compliance to help you enhance creativity by respecting diversity. Our across-the-board professionals take the possession to help you create a Compliance Team, standardize a risk analysis process, unlade the controls, and make the policies that turn out to be the foundation for any mandatory internal or external audits.

Our highly skilled professionals strive round the clock to bring the power of Big Data Analytics and Automation to provide more efficient and agile security controls to our out-of-the-ordinary clients. If your business is intended to follow a set of rules to meet some requirements, we can smoothly help you through the process with our resilient cyber security program.

## YELKAYE IT@Data Recovery

Hard drive failure frequently causes data loss. The experienced and tech-savvy professionals at YELKAYE IT Consulting exceptionally take the possession to salvage inaccessible, lost, damaged, or formatted data when the hard drive is inaccessible. We can also strategically restore files deleted or lost on all types of data storage media, including hard drives, memory cards, USB drives, flash drives, digital cameras, and many more.

In addition, mistaken file and folder deletions can be undone and restored in seconds to drive dramatic improvements and create a right-fit future model. Also, we can access and recover files from a completely formatted hard drive, swiftly recover files from a cleaned Recycle Bin, and rediscover your lost partitions instantly.

After that, we scan and dependably recover data from these partitions and develop an actionable roadmap to achieve best-in-class performance. If your business encounters malware or a virus, we can retrieve your precious data with robotics-based and end-to-end technology solutions.
